Count 1

A metal coordination complex comprising a metal of group 4 of the periodic table of the elements and a delocalized π -bonded moiety substituted with a constrain-inducing moiety, said complex having a constrained geometry about the metal atom such that the angle at the metal between the centroid of the delocalized, substituted π -bonded moiety and the center of at least one remaining substituent [sic] is less than such angle in a similar complex containing a similar π -bonded moiety lacking in such constrain-inducing substituent, and provided further that for such complexes comprising more than one delocalized, substituted π -bonded moiety, only one thereof for each metal atom of the complex is a cyclic, delocalized, substituted π -bonded moiety.

or

A compound having the general formula:

wherein "M" is Zr, Hf or Ti;

$(C_5H_{5-y-x}R_x)$ is a cyclopentadienyl ring which is substituted with from zero to five substituent groups "R", "x" is 0, 1, 2, 3,

4, or 5 denoting the degree of substitution, and each substituent group "R" is, independently, a radical selected from a group consisting of C_1-C_{20} hydrocarbyl radicals, substituted C_1-C_{20} C_1-C_{20} [sic] hydrocarby [sic: hydrocarbyl] radicals wherein one or more hydrogen atoms is replaced by a halogen atom, C_1-C_{20} hydrocarbyl-substituted metalloid radicals wherein the metalloid is selected from the Group IV A of the Periodic Table of Elements, and halogen radicals or $(C_5H_{5-y}R_x)$ is a cyclopentadienyl ring in which two adjacent "R" groups are joined forming C_4-C_{20} ring to give a saturated or unsaturated polycyclic cyclopentadienyl ligand;

(JR'_{z-1-y}) is a heteroatom legand in which "J" is an element with a coordination number of three from Group V A or an element with a coordination number of two from Group VI A of the Periodic Table of Elements, and each "R'" is, independently a radical selected from a group consisting of C_1-C_{20} hydrocarbyl radicals, substituted C_1-C_{20} hydrocarbyl radicals wherein one or more hydrogen atoms is replaced by a halogen atom, and "z" is the coordination number of the element "J";

each "Q" is, independently any univalent anionic ligand or two "Q"'s are a divalent anionic chelating ligand;

"y" is 0 or 1 when "v" is greater than 0; "y" is 1 when "v" is 0;

"B" is a covalent bridging group containing a Group IV A or V A element;

"L" is a Lewis base where "w" denotes a number from 0 to 3;

"M'" has the same meaning as "M"; and

"Q'" has the same meaning as "Q".

The claims of the parties which correspond to this count are:

Canich: Claims 2, 4-6, 25-26.
